

## SEVEN GALLON POULTRY DURAFOUNT™

To fill, snap lower closure up over the O-ring on the discharge tube. The closure will more readily snap over the O-ring if you slightly twist the closure just as it engages the O-ring. Remove top cap, remove cup and fill tank. Replace seal, insert cup and top cap. Note the position of the seal. See below. Do not overly tighten the cap. Just snug it enough that a vacuum is achieved. Snap lower closure downwardly to reveal hole in the discharge tube. Water will flow into the trough.

Protect the surface at the top opening as a smooth surface is needed to properly engage the seal. When replacing the cup and top cap after you fill the fount, make sure no feed or other foreign material is present on either the surface of the fount opening or on the seal. Capacity: 140 pullets or broilers, 90 hens. Model No. 7GF.

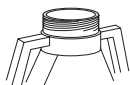

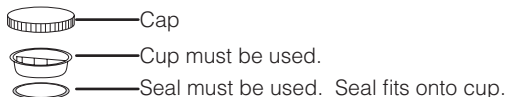

EQUIPMENT FOR POULTRY • LIVESTOCK • PETS
